Certifications

Microsoft Certified: Azure Fundamentals (AZ-900)
View Credential

Education

Red River College Winnipeg, MB
Diploma in Aeronautical Maintenance Engineering *2022 – 2024*

Experience

Full Stack Engineer Nov 2024 – Present
Coreli Solutions
- Built and deployed APIs client-facing applications.
- Migrated applications to AWS, improving scalability and reducing operational costs.
- Optimized SQL queries, improving application performance by up to 40%.

Technical Support Advisor Mar 2026 – June 2026
Teleperformance
- Performed software diagnostics to identify and isolate bugs across devices and applications.
- Coordinated with team leads and managers to configure devices.
- Documented recurring technical issues and implemented clear troubleshooting resolutions.
- Provided end-user technical support through ticketing systems and remote troubleshooting.

Projects

Hospital Readmission Risk Analysis
SQL, Google BigQuery, GitHub
- Analyzed 100K+ diabetic patient encounters from 130 US hospitals (UCI dataset, 1999–2008) to identify 30-day readmission risk drivers.
- Built a SQL data-cleaning and profiling pipeline in BigQuery, producing a patient-level cohort of 69,973 patients.
- Calculated a 9.0% baseline 30-day readmission rate and segmented risk by patient and encounter attributes.
- Documented queries, methodology, and findings in a structured GitHub repository for reproducibility.

Agentic Coding Assistant
Python, AI Agent, Tool Calling
- Built a Claude Code-style AI coding agent from scratch in pure Python.
- Implemented an interactive chat loop with conversation memory.
- Added tool calling so the agent can take actions beyond text generation.

Groq Conversational AI Web Application
FastAPI, React, Groq API
- Built a FastAPI backend to handle chat requests and integrate with Groq API.
- Developed an AI chatbot using Llama 3.1 (8B Instant) model.
- Implemented a responsive React + Vite frontend with a clean UI.

Multi-User Chat Application
Python, Socket.IO, WebSockets
- Built a real-time chat platform supporting multiple users and message exchange.
- Implemented WebSockets using Python Socket.IO for real-time communication.
- Enabled dynamic usernames and room join/leave functionality.

Technical Skills

Languages: Python, SQL, JavaScript, HTML/CSS
Frameworks: React, Express
Developer Tools: Git, Docker, Google Cloud Platform
